Quest - Quick User-directed Expression Search Tool
Release 5.4

-- Outline of search "pepl_ags" --

Selected search type is key against sequence data banks or files.
Selected scope is Sequence.
Selected sequence key from "collins496.key":
pepl (AA) ID pepl AA preliminary pattern
followed by
1 any character from 2 to 10 times
2 C
2 any character from 2 to 5 times
2 C
2 any character from 4 to 10 times
2 C
2 any character from 3 to 10 times
2 C
2 any character from 2 to 4 times
2 C
2 any character from 7 to 15 times
2 C
2 any character from 2 to 10 times

Selected files:
File : lectins.pep

-- Output Parameters --

Format Options:

XX
XX New barley BLC3 lectin DNA, useful for encoding the Gramineae lectin in a
XX plant and providing insecticidal and fungicidal properties to the plant,
XX and for producing transgenic plants expressing the Gramineae lectin.
XX
XX Example 1; Fig 1; 23pp; English.
XX
XX The present sequence is that of barley lectin, as predicted from isolated
XX cDNA clone BLC3 (see AAA88642). Barley lectin is a vacuolar protein that
XX accumulates in developing embryos and in the root tips of adult plants.
XX Expression studies in transgenic tobacco showed that the BLC3 signal
XX peptide was correctly removed and that the polypeptide was glycosylated
XX via high mannose glycan at Asn-206. The glycan and C-terminal peptide
XX were removed before deposition of the mature protein in the vacuoles. The
XX invention also relates to a transgenic plant containing cDNA encoding
XX Gramineae lectin. The plants preferably contain cDNA coding for barley
XX lectin and store the lectin in the leaves. The transgenic plants,
XX particularly the leaves, exhibit insecticidal and fungicidal properties
